

# Finding solutions together

AECOM in Germany and Switzerland

We live where you live and understand the world's challenges. We know the importance of fresh water, clean and reliable energy, efficient transportation systems and industrial facilities, as well as beautiful and well served buildings, communities and cities. With thousands of experts globally, we are able to serve clients in more than 150 countries across all components of a project's life cycle including design, build, finance and operation.

In Germany and Switzerland, AECOM has around 500 employees working on every step of a project, in multidisciplinary teams made up of engineers, architects, designers, geologists, scientists and psychologists.

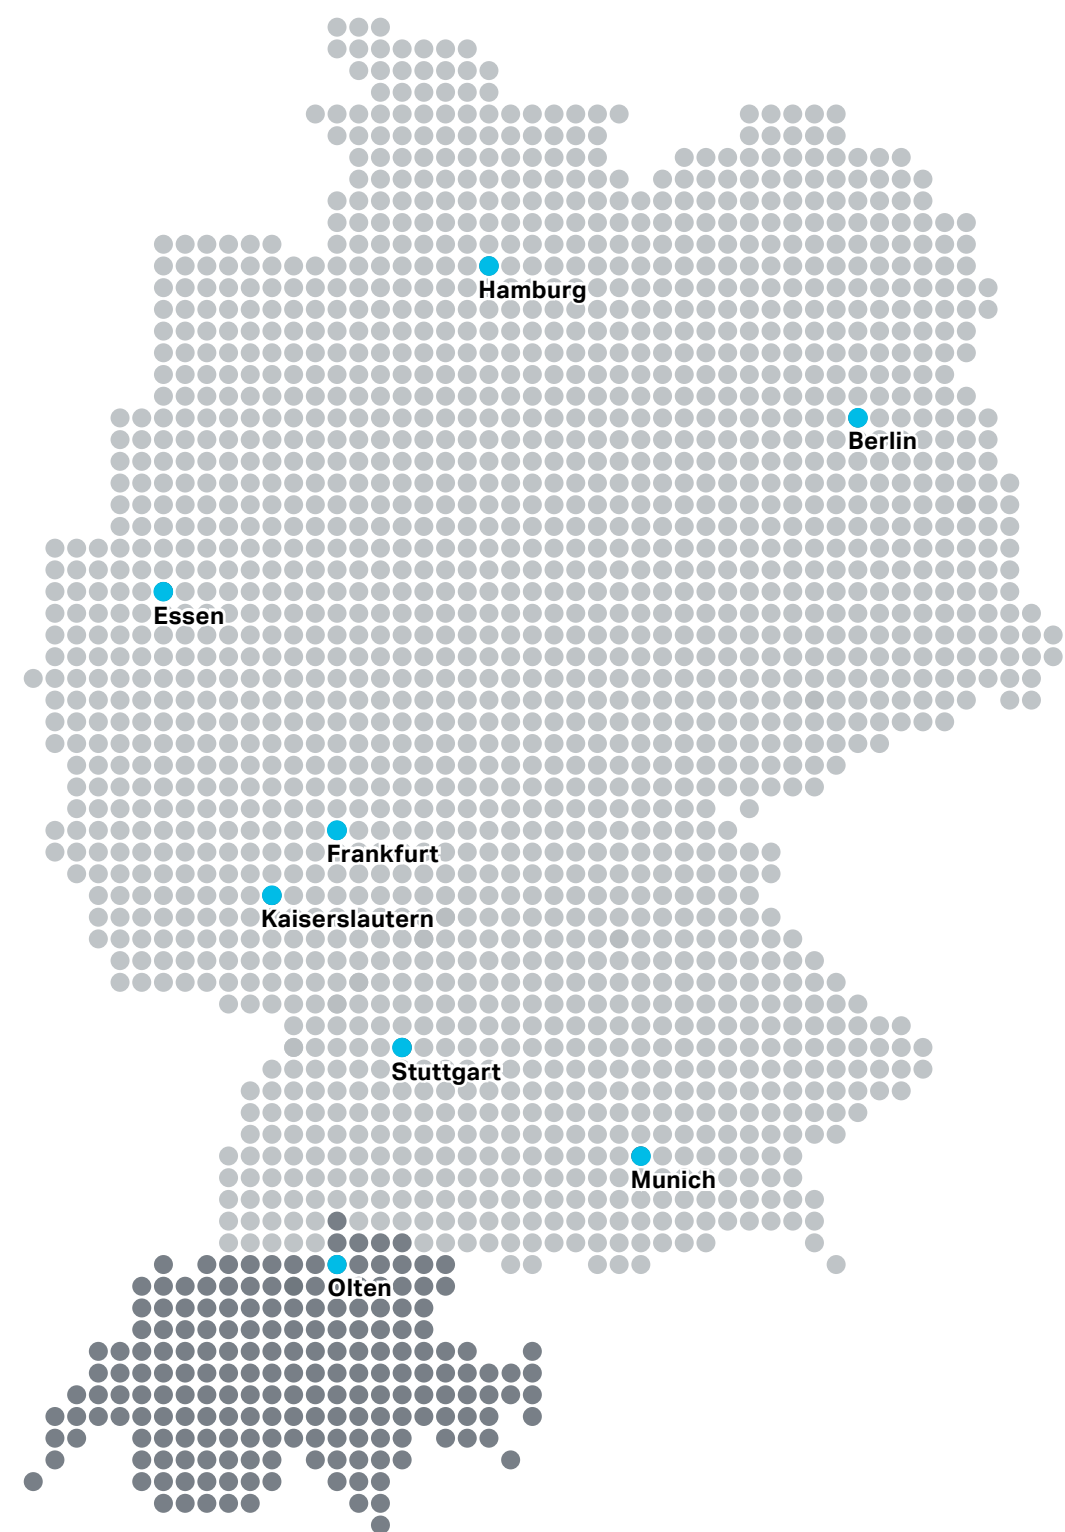

With 8 offices in the region, we collaborate with almost 90,000 experts, bringing together local knowledge and international experience.

Among others, we provide expertise on concept planning, process engineering, feasibility studies, sustainability certifications, remediation services, decommissioning, and workplace and change management.

We're there every step of the way — a single source provider for the entire project life cycle.

# Buildings + Places

Good architecture combines aesthetics with functionality and profitability with sustainability. AECOM is a strong, world-leading architecture partner with a global range of possibilities.

Holistic customer orientation, goal-oriented creativity and sustainable benefits are at the heart of our thinking and actions. We apply these values in our projects, from iconic buildings, congress centres, offices and commercial buildings, to logistic parks, sport arenas and production facilities.

The technical interaction between our architects and engineers and our innovative and award-winning use of Building Information Modelling (BIM) ensures tailored, technically feasible single-source solutions and a conflict-free planning process across borders.

At AECOM, we place particular value on the protection and conservation of the environment. We support our clients in areas such as sustainability consulting and building certifications (LEED, BREEAM, DGNB). Our local expertise will ensure you always comply with the applicable directives and regulations.

### Selected areas

- Cities / public sectors
- Hospitality / leisure
- Commercial
- Automotive
- Industrial
- Oil & gas
- Pharmaceutical

### Selected services

- Project management
- Workplace strategy and interior design
- Architecture
- Engineering (mechanical, electrical, structural, fire protection)
- Real estate consulting

LinkedIn, Munich

AECOM provided a detailed design concept for LinkedIn's German headquarters for up to 100 employees and guests. Our services included design, cost management, workplace management and real estate management, tendering and purchasing, and site management. The resulting concept "Work-Play-Energize!" hosts the team in the heart of Munich and connects it worldwide through IT and AV integration.

# Integrated solutions for complex challenges

Kö-Bogen, Düsseldorf

Kö-Bogen is a prestigious mixed-use retail and commercial development designed by the world-renowned architect Daniel Libeskind. AECOM provided LEED certification services for the project. It was awarded two Platinum ratings under "LEED for Core & Shell Projects Version 3.0".

#### Shell Technology Centre Hamburg

The STCHA is a world-class research site where Shell Germany researches and develops fuels and lubricants. Shell commissioned AECOM to conduct a feasibility study and develop a sustainable concept for refurbishment and future site development. AECOM also developed the concept design for new facilities of the site, using 3D modelling. A focus of the project was detailed cost estimates and the elaboration of an implementation concept.

#### Siemens Healthineers, Erlangen

AECOM is providing architecture, project management, and controlling and financial services for the €50 million redevelopment of the headquarters of Siemens Healthineers, one of the world's largest healthcare providers. The redevelopment included the construction of a new building, built to LEED standards, with 20,000 square metres GFA, and an underground car park for 240 vehicles.

# Environment

Sustainability, resource conservation, alternative energy, and improved quality of life through protection and preservation of the environment are the engines for a successful future — but adopting these principles and approaches can pose a major challenge to companies.

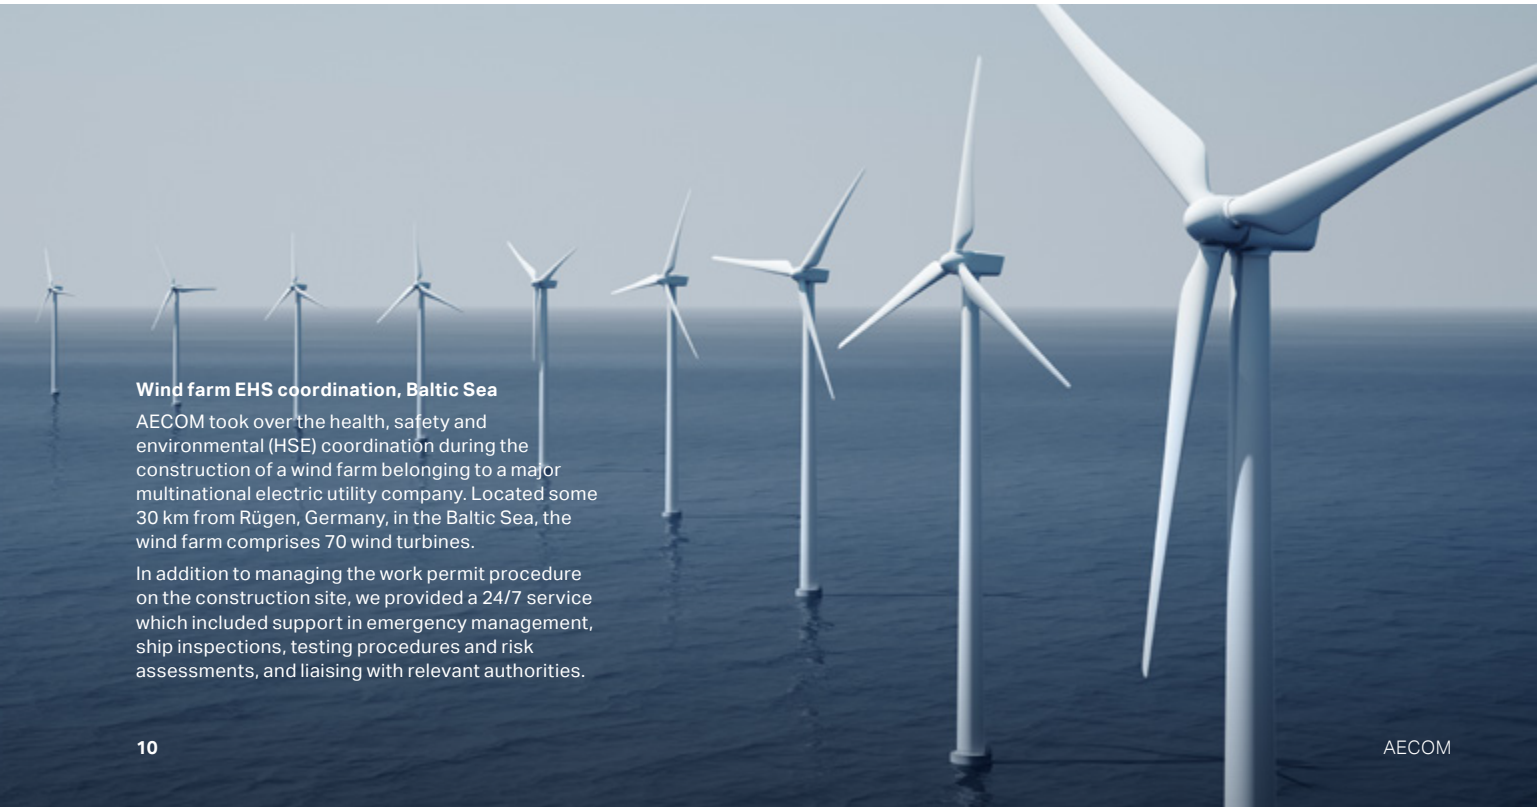

AECOM helps realise your visions, guide your strategies, tackle your challenges, and achieve your individual environmental goals. Our service teams and consultants use their global expertise in environmental and infrastructure projects and understanding of market-leading technologies, relevant laws and the latest research to support you with your projects. We can help you deliver a better world for the next generation.

### Selected areas

- Wind and power
- Water
- Oil, gas and chemicals
- Public sector

### Selected services

- Soil and groundwater remediation
- Permit management and environmental impact assessment
- Management support services
- Compliance and environmental due diligence assessments

**Wind farm EHS coordination, Baltic Sea**  
AECOM took over the health, safety and environmental (HSE) coordination during the construction of a wind farm belonging to a major multinational electric utility company. Located some 30 km from Rügen, Germany, in the Baltic Sea, the wind farm comprises 70 wind turbines.  
In addition to managing the work permit procedure on the construction site, we provided a 24/7 service which included support in emergency management, ship inspections, testing procedures and risk assessments, and liaising with relevant authorities.

# Innovative solutions for a cleaner tomorrow

**Deutsche Bahn, Frankfurt**  
German railway operator Deutsche Bahn is building a new S-Bahn line to connect Gateway Gardens, a new 35-hectare business district, with Frankfurt Airport. The route is located within a Drinking Water Protection Area and includes the construction of a tunnel. AECOM is conducting an extensive program of groundwater monitoring to assess the potential impact of components and hydro-chemicals reaching the groundwater through the construction.

**Support with complex permit applications**

For nearly 10 years, AECOM has been serving several chemical technical large-scale plants in Germany. We act as the link between building contractors, engineering partners, client HSE departments and national regulatory authorities.

We create comprehensive approval documentation for all types of new and reconstructed industrial plants, and the installation of infrastructure such as pipelines, power lines and rail transport. Among others, the application documents contain security reports, protection and security concepts, emission projections, waste disposal concepts and initial status reports.

**Due diligence assessments, Central Europe**

AECOM conducted a technical and environmental due diligence assessment for a client's portfolio of nearly 80 power plants and installations spread across Germany, Poland and the Czech Republic. The installations ranged from mine gas, biogas and geothermal facilities to fossil-fuel-fired cogeneration plants.

# Construction Services

From planning through implementation, AECOM is a global developer of complex buildings such as sustainable office buildings, power plants, manufacturing and production halls, and sport and leisure facilities.

We create buildings designed for your individual needs. AECOM's regional and international network of experienced service providers in the construction industry will finish your project in a cost- and time-efficient way and to the highest standard. Our services range from project and construction management to general contractor. We're a one-stop-shop partner in strategy, planning and implementation.

### Selected areas

- Transportation
- Industrial
- Oil, gas and chemicals
- Commercial and residential

### Selected services

- Program management
- Construction management
- Owner representation
- General contracting
- Design and build

**Europacity, Berlin**  
AECOM provided planning services for the clearing of the land onto which Europacity, a new urban quarter in Berlin, is being constructed. Services included evaluating and dismantling building stock, developing resource-saving measures for disposing construction waste, and monitoring deadlines, budgets and planning requirements.

# Be prepared for challenges

**Construction and quality management, Lower Saxony**  
An international refinery is building a new complex of buildings to host its administration, workshops, laboratory, canteen and fire department. AECOM is providing construction and quality management for this multi-million-euro project, which aims to enhance safety, collaboration and openness.

**JadeWeserPort, Wilhelmshaven**

Positioned in Wilhelmshaven on a bay on the North Sea coast, JadeWeserPort operates as the easternmost deep-water container port in Europe, and the only deep-water port in Germany. It is able to provide berths for large commercial container ships traversing the North Sea to and from Russia, Scandinavia, and the Baltic States. AECOM has been providing co-ordination, controlling and supervisory services since 2008.

# Government

As a top-tier government services contractor, AECOM provides engineering, construction, and specialised technical services to major defence agencies across the globe.

Our ability to adapt to the evolving needs of the federal marketplace means that AECOM services and expertise align with the spending priorities of our federal clients. We help the U.S. Department of Defense realign and modernise its installations worldwide through the design and construction of military facilities, such as hangars, barracks, and hospitals.

AECOM also helps the German, U.S. and other governments meet international treaty obligations to eliminate nuclear, chemical, and biological weapons. We manage chemical weapons demilitarisation programs at U.S. Army facilities, and assist in the elimination of weapons of mass destruction in the former Soviet Union.

### Selected services

- Architectural and engineering services
- Construction services
- Specialty services
- Environmental services
- Cyber operation services
- Risk assessment
- Remediation
- Operations and maintenance
- Construction inspection and oversight
- Commissioning

**Ramstein Air Base, Kaiserslautern**  
AECOM provides general architectural and engineering services for the Ramstein Air Base on behalf of the U.S. Air Force. The base serves as the headquarters for the U.S. Air Force in Europe and Africa and is a NATO installation. AECOM renders multi-discipline services required for the design of various U.S. military buildings, structures and facilities. Specific disciplines range from general architectural services, interior design and space planning, and landscape architecture to electrical, civil, and mechanical engineering. Design work can involve major and minor construction projects and the rehabilitation of various structures.

Safeguarding  
people,  
communities  
and governments  
for a better world

# A culture of caring

Deeply rooted in our Safety, Health & Environment (SH&E) Management System, AECOM's "culture of caring" sets an expectation for each employee, contractor and business partner to take personal responsibility for keeping our colleagues, and others associated with our work, safe.

Whether located on a project site, in the office or at home, we embrace safety as a lifestyle choice by maintaining essential safety procedures and behaviours everywhere we go.

## Commitment

Managers will lead on safety, continuously demonstrating commitment to the highest standards.

## Fit for duty

Staff come to work each day fit and well, so they do not pose a hazard to themselves or others.

## Participation

All employees are encouraged to engage in helping to control the risks we face.

## Incident investigation

We investigate incidents and near-misses to understand root causes and take action to prevent recurrence.

## Budgeting and staffing for safety

We budget SH&E costs into every project. Our safety staff are fully trained to provide expert guidance.

## Orientation and training

Employees are given the latest safety training to identify and mitigate hazards to prevent work-related incidents.

## Pre-planning

We assess risks and produce detailed plans to control them during design, planning and execution of work.

## Effective partnerships

We work closely with all of our partners to create a safe working environment.

## Rewarding best practice

Employees are rewarded for safety excellence and we share best practices.

Safety is fundamental to AECOM's purpose — to positively impact lives, transform communities and make the world a better place.

# We care for our communities

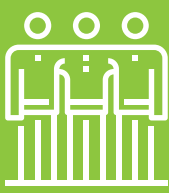

Community engagement is at the core of AECOM's Corporate Social Responsibility (CSR) program. Our company and our employees have a long history of contributing to society and the environment by supporting pro bono, philanthropic and charitable activities in the places where we work and live — as well as in under-served communities.

We have participated in thousands of CSR projects across the globe. In our understanding, social responsibility is a fundamental element of our commitment to work towards continuous improvement and responsible management of the economic, environmental and social impacts of our activities.

### Blood drives

AECOM employees are active blood donors. Our offices in Europe continuously organise blood drives with the hope that our involvement will save lives.

### Communities

Christmas gifts, language lessons for children, work in shelters, charity running events, or cooking fairs — these are just a few examples of how we support those in need. By getting actively involved we open our minds to the challenges the world is facing.

### Environment

As the leading environmental consultant in the world, we also care for our surroundings. To reduce the use of water and electricity we run many educational campaigns to raise environmental awareness of our employees.

Building a community library out of mud in the Kibaoni village on the eastern slope of Kilimanjaro Mountain, Tanzania in September 2016.
