

Remedial Construction Services

As a sophisticated engineering and construction company, we focus on implementing permanent solutions through innovative technologies and approaches. AECOM is one of the few construction contractors capable of providing and self-performing comprehensive, turnkey remediation, engineering and construction services.

Services

- Manufactured Gas Plant Site Remediation and Restoration
- Coal Combustion Residuals Management
- Decommissioning, Deactivation, Decontamination, Demolition Services
- Sediments, Contaminated Materials Removal from Waterways
- Wetland Remediation, Restoration
- Soil Stabilization and Solidification
- Earth Support Structure Installation
- Retaining Wall, Slurry Wall Construction
- Water Treatment and Discharge Utilizing M Treatment Systems
- Temporary and Permanent Roadways, Bridges, Parking
- Meticulous and Surgical Type Excavations
- Underground Piping Installation
- Utility Installations, Relocations
- Engineered Erosion and Sediment Control
- Storm Water Management and Dewatering

Overview

When companies are searching for the right remedial construction firm, it's important that the construction solution has an integrated approach, designing with the end use in mind. Safety is a top priority, and the right contractor should be able to solve complex problems with cost-saving solutions. It's important to have established relationships with regulators and stakeholders, and have a local presence.

AECOM provides all those benefits, with a long, successful history of supplying remediation and environmental construction services to a broad range of clients. AECOM and its predecessor companies have served the public and private sectors for over 40 years, delivering a variety of remediation, environmental construction, and operation and maintenance services. Our team has a successful record of implementing technically sound, cost effective solutions that are structured to meet the needs of our clients.

Our Approach

AECOM provides full-service in-house remediation construction capabilities and have successfully completed a wide range of remedial action construction projects for a variety of commercial and industrial clients and government agencies.

Our experience ranges from relatively simple projects, such as the removal of USTs and associated contaminated soil, to extremely complex, large-scale heavy civil remediation projects involving the excavation, analytical assessment, transportation and disposal of hazardous waste material. Regardless of the size and complexity of the project, we provide cost-effective solutions to meet the technical requirements, while maintaining superior safety and health and quality performance. Our projects are completed in compliance with the requirements of numerous regulatory programs, including RCRA, CERCLA, and TSCA.

Our remediation and construction specialists have years of experience in solving a wide array of environmental problems in a timely and safe manner. AECOM continually works to improve the effectiveness of the methods and approaches in each phase of the remediation process.

This philosophy is derived from a diverse history of evaluation and refinement of environmental technology, as well as a continuing awareness of innovative/emerging technologies.

Key AECOM Attributes

- Our remedial construction division is responsible for the acquisition, planning, and implementation of all environmental construction and remediation projects undertaken by AECOM. Our focused mission allows us to provide our clients with the appropriate professional and field personnel, specialized equipment, and other resources specifically required to construct and operate our remediation projects.
- Our remediation construction experience encompasses a wide range in the private and public sectors, including industrial, commercial, entertainment, airport, education, correction, transit, and public works facilities. In addition to managing projects under the traditional bid method, we are also experienced in the design-build and turnkey delivery methods.
- AECOM provides professional oversight services on remediation and construction projects and programs worldwide. Our experts manage design consultants and construction contractors to help deliver projects on time, within budget, and to the specified quality requirements, with constant attention to the prevention of claims.
- AECOM keeps costs in check with sound estimating and budgeting, a realistic decision-making process, tight financial controls, and an effective management information system for project monitoring. Furthermore, we help clients maximize their budgets with services such as value engineering to improve project functionality and to reduce costs. During the early design phase, our value engineering specialists conduct a rigorous analysis where essential functions are checked to make sure they are procured at the lowest life-cycle cost, while meeting client standards.
