

Plumbing Vent thru Roof

Make sure that the vent pipes which penetrate the roof has the proper height above the finish roof level (including the insulation).

Always review local Plumbing Code

Per ICC Plumbing Code

- **Non-Snowy Regions:** min. 6 inches above the roof surface.
- **Snowy regions:** Increase to 12 inches or more.
- **Occupied roofs:** Minimum of 7 feet above the roof.
- **Near walls/parapets:** At least 2 feet higher than adjacent structures.

Take into account tapered insulation

Also – Please review your roof to make sure that vent pipes are at least 15'-0" away from any HVAC equipment.
